CUSTOMER

Prairie Heights Elementary
& Middle School Cafeteria

LOCATION

LaGrange, Indiana

INDUSTRY

Schools & Universities

CONTRACTOR

Northern Industrial Flooring, Inc
Angola, Indiana

PROJECT COMPLETION

July 2024

About The Project

Prairie Heights Middle & Elementary School was built in the 1970's. While the most cost effective and efficient flooring systems were 2"x 2" ceramic tiles, this resulted in a harder to clean and slippery floor, with deteriorating grout lines. Our client was looking for a modern flooring system that would provide a non-skid, antimicrobial material for the main kitchen, serving areas, dishwashing stations and dry storage. The flooring would also have to withstand the chairs, tables, and the natural abuse of typical elementary and middle school students.

The Challenge

Prairie Heights was looking for a flooring system that could go over the existing ceramic tile to save on the cost of removal, minimize damage to the concrete and be done in a timely manner with minimal dust. The elementary cafeteria and kitchen had ceramic tile and the middle school cafeteria was comprised of ceramic tile, vinyl tile squares and carpet from an addition put on in the early 90's.
